## 1. ESTUDIO TOPOGRÁFICO

### 1.1. Antecedentes

Los trabajos de ingeniería tienen como base los trabajos de topografía inicial en donde se adquiere la información existente de vías, postes, casas, obras hidráulicas, túneles, ríos, quebradas, sistema de agua potable, sistemas de alcantarillado, puentes, etc., los cuales permiten la correcta planificación, diseño y construcción del proyecto vial.

Para realizar un rediseño de la tubería de conducción de agua potable no existe un catastro de la ubicación real de la tubería de conducción desde la planta de agua en la parroquia San Isidro hacia los tanques de reserva ubicados en la parroquia Proaño y el tanque de reserva ubicado en barrio la florida en la ciudad de Macas.

El presente proyecto inicia en la planta de agua (abscisa 0+000.00km) de la parroquia San Isidro siguiendo una vía de cuarto orden a nivel de subbase hasta llegar a la parroquia San Isidro (abscisa 1+400.00km) para continuar por la vía asfaltada hacia los tanques de reserva en la parroquia Proaño (abscisa 7+360km) y termina en el mercado la Unión ubicado en la ciudad de Macas (abscisa 12+500km)

---

## **1.2. Objetivos.**

### **1.2.1. Objetivo general**

Realizar el levantamiento topográfico de la tubería de conducción existente de agua potable desde la planta de tratamiento de San Isidro hacia los tanques de reserva de la parroquia Proaño y el tanque de reserva ubicado en barrio la florida en la ciudad de Macas.

### **1.2.2. Objetivos específicos**

- Adquirir información de una franja topográfica de 10m de ancho a cada lado desde los bordes de cuneta de la vía existente.
- Enlazar el proyecto vial a la red geodésica nacional utilizando coordenadas geográficas UTM WGS-84

### 1.3. Análisis y recopilación de información

Todos los trabajos de control necesarios para el proyecto se han realizado en función del elipsoide de referencia global utilizado WGS84, cuyos parámetros geométricos son:

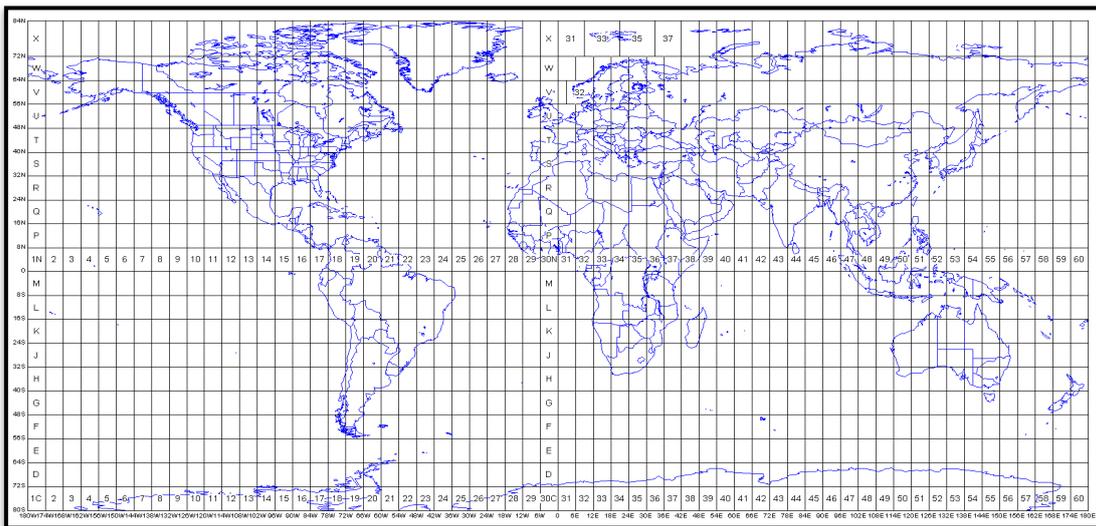

- $a = 6\,378\,137.000$  m, semieje mayor
- $f = 1/298.257223563$ , achatamiento

#### 1.3.1. Ubicación del proyecto respecto a las coordenadas UTM WGS 84

El sistema de coordenadas universal transversal de Mercator (UTM) es un sistema de coordenadas basado en la proyección cartográfica transversa de Mercator, que se construye como la como la proyección de Mercator normal, pero en vez de hacerla tangente al Ecuador, se hace secante a un meridiano, a diferencia del sistema de coordenadas geográficas expresadas en longitud y latitud las magnitudes en el sistema UTM se expresan en metros.

Hay que entender que el sistema de coordenadas UTM tiene 60 husos numerados del 1 al 60, comenzando por el meridiano  $180^\circ$  y cada huso definido por 20 zonas o bandas.

**Ilustración 1. Zonas UTM WGS 84 del mapa mundial**

Fuente: <http://www.dmap.co.uk/utmworld.htm>

#### 1.3.2. Análisis de la información

Determinada la zona establecida para el plan de trabajo de campo se detallan los datos en el siguiente cuadro:

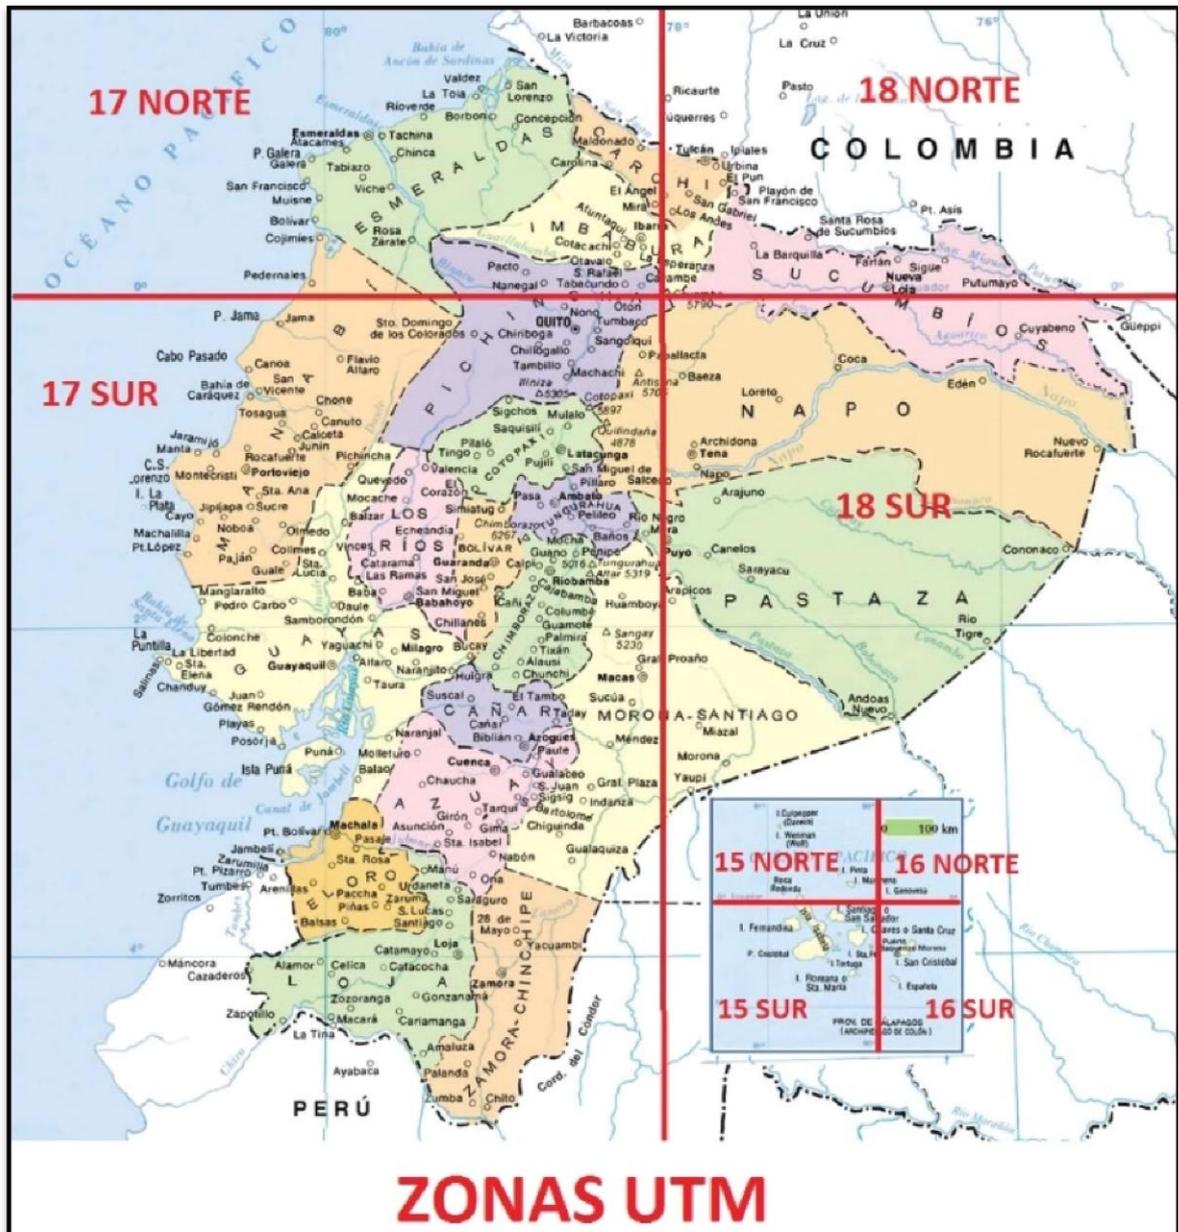

**Tabla 1. Proyección cartográfica general**

Proyección cartográfica universal transverse Mercator (UTM)
Datum SIRGAS (WGA-84)
Zona 17 sur
Geoide: EGM – 2008 (Global)

Elaborado por: Equipo consultor

La Republica del Ecuador en territorio continental esta intersecado por 4 zona que se detallan en la siguiente ilustración.

**Ilustración 2. Zonas UTM WGS 84 en la Republica del Ecuador continental**

Fuente: [ingenium.world/photos/a.224878461029322/1435383759978780/](https://ingenium.world/photos/a.224878461029322/1435383759978780/)

Estas son las zonas 17 M , 17 N , 18 M , 18 N, genéricamente se indica únicamente el hemisferio Norte o Sur ( Norte = zona M y Sur = zona N)

#### 1.4. Levantamiento topográfico

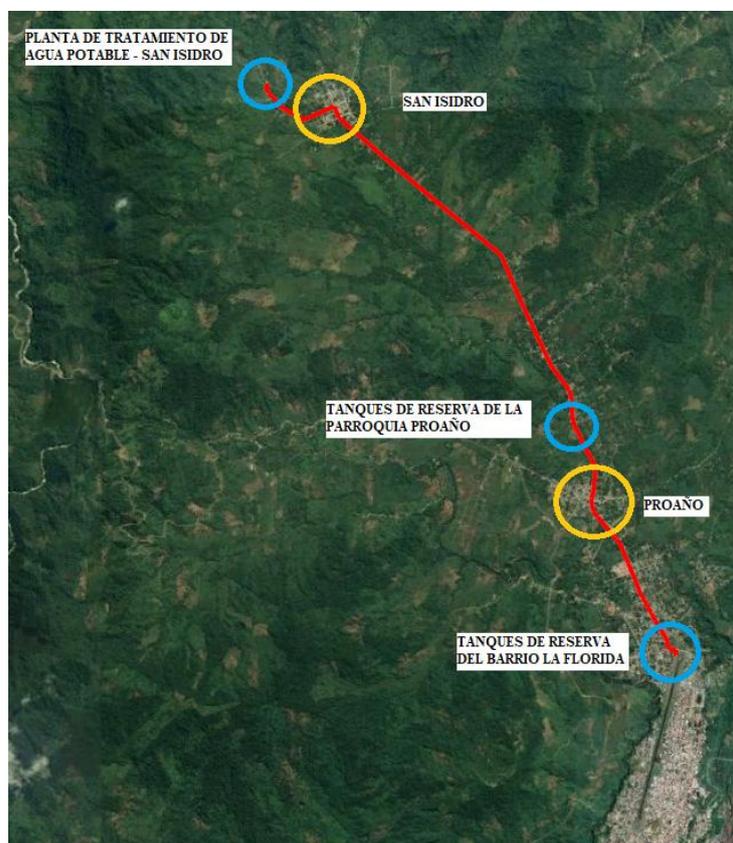

Para el levantamiento de información topográfica se ha planteado las siguientes actividades.

- Establecer la ubicación del proyecto respecto a las coordenadas UTM WGS 84
- Empezar los trabajos de campo para el levantamiento de información.

### 1.4.1. Localización geográfica del área de estudio

El trazado vial del presente proyecto está emplazado en la provincia de Morona Santiago parte de la planta de agua ubicada en la parroquia San Isidro y llega al mercado La Unión en la ciudad de Macas.

**Ilustración 3. Implantación del proyecto vial**

Elaborado por: Equipo Consultor

Por lo expuesto el trazado el proyecto se implanta en las coordenadas UTM WGS 84–ZONA 17 SUR.

### 1.4.2. Topografía general de la zona

El proyecto se emplaza en una zona baja donde los sectores son claramente identificados.

**Tabla 2. Caracterización general de la zona de estudio**

Caracterización	Zona Baja
Morfología - Topografía	La vía existente tiene una topografía ondulada con zonas planas con pendientes menores al 1 % y pocas zonas con pendientes superiores al 12 %. Existen pasos de agua no modelados con rasgos dominantes.
Vegetación	No existe vegetación densa en el trazado vial

	existente
Forma de Rocas	No existen formaciones rocosas
Agua – Arroyos y ríos	Ríos y cruces de agua identificados con variación de caudales

Elaborado por: Equipo consultor

### 1.5. Trabajo de campo

El presente proyecto inicia en la planta de agua (abscisa 0+000.00km) de la parroquia San Isidro siguiendo una vía de cuarto orden a nivel de subbase hasta llegar a la parroquia San Isidro (abscisa 1+400.00km) para continuar por la vía asfaltada hacia los tanques de reserva en la parroquia Proaño (abscisa 7+360km) y en el mercado la Unión en la ciudad de Macas (abscisa 12+500km)

Durante el levantamiento de información se obtuvo información cada 20m de estructuras de hormigón existentes como muros, postes luz, pozos de revisión, cajas y válvulas. Además se realizaron 5 puntos de control geodésico los cuales están enlazados con la red geodésica nacional con la estación REMDE MAEC, en coordenadas UTM WGS 84 , ZONA 17 SUR, cabe mencionar que para el levantamiento se utilizaron estaciones ubicadas en el asfalto de la vía existente claramente identificadas con pintura roja y blanca con un clavo de acero en el centro de una figura cuadrada.

### 1.5.1. Equipo utilizado para la obtención de datos GNSS

El equipo utilizado para los trabajos de campo fue el siguiente:

- Receptor ASHTECH UZ - 12

**Ilustración 5. Receptor GNSS, Marca ASHTECH**

<p><b>Descripción:</b> El punto "GPS05" se encuentra localizado sobre un clavo de acero en el centro de la marca colocada sobre el asfalto en la Av. Jaime Roldós Aguilera con la inscripción "E30", ubicado al final del parterre central en dirección norte, a 43 m del Mercado La Unión.</p>					
<p><b>Accesibilidad:</b> Partiendo del parque central de la ciudad de Macas, se sigue por la calle 24 de mayo por 1.32 Km hasta su intersección con la calle Soasti, avanza por esta con dirección a General Proaño por 574 m hasta el redondel donde circunvala y continua por la calle Luisa Jaramillo hasta su intersección con la Av. 13 de Abril, gira a mano izquierda (en dirección sur) por la Av. 13 de Abril hasta encontrarse con la Av. Jaime Roldós Aguilera por la que sigue 1.09 Km aproximadamente, para localizar el punto sobre la marca colocada sobre el asfalto con la inscripción "E30".</p>					
<p><b>Materialización del punto:</b> Clavo de acero empotrado en el centro de la marca colocada sobre el asfalto en la Av. Jaime Roldós Aguilera con la inscripción "E30".</p>					
<p><b>Observaciones:</b> Punto ubicado al final del parterre central en dirección norte de la Av. Jaime Roldós Aguilera, a 43 m del Mercado La Unión.</p>					

Se colocaron 5 puntos de control GNSS, y se obtuvo el proceso de 9 puntos de enlace de coordenadas con red REGME WGS 84.

Los métodos empleados para realizar los levantamientos con la antena GPS fue:

Método Estático: Método clásico para líneas largas y alta precisión EMC en la línea base de 3 mm + 0.5 ppm.

- Medición clásica para líneas base GPS, donde cada línea fue observada en el rango mínimo de 120 a 300 min.
- El tiempo de observación es proporcional a la longitud de la línea.
- Método aplicado inclusive para líneas mayores de 15 Km. criben:

### 1.5.2. Obtención de datos topográficos.

- Estación total SOUTH N7

**Tabla 9. Especificaciones técnicas Estación total SOUTH N7**

Sistema EDM	5000m
Precisión	+/- (2+2ppm X D)mm
Compensador Automático	Sistema Doble ej eléctrico – líquido
	Rango de trabajo +/- 4'
	Precisión 1"

Fuente: South

Una vez colocados los puntos estáticos se empezó la obtención de la franja topográfica para lo cual se utilizó una ESTACIÓN TOTAL marca SOUTH modelo N7, empezando desde la planta de agua potable en la parroquia San Isidro dejando 2 puntos BM ubicados en las esquinas del tanque de reserva enterrado, se realizaron levantamiento de secciones cada 20 m respecto al eje vial existente con un ancho de 10 m desde los bordes a cada lado de la vía ( 35 m de franja aproximado) , en donde se levantó información de postes existentes, pozos de agua, puentes, estructuras de drenaje hidráulico, quebradas, casas y cruces de agua existentes, los cuales permitirán el cálculo correcto de corte y relleno en el proyecto. Para completar la franja topográfica a 100 m respecto del eje de la vía se realizó un sobrevuelo con drone el cual permite ampliar la faja topográfica a más de 100m a cada lado de la carretera con una precisión de 0.05 cm / pixel, información que fue procesada con el software Agisoft Metashape.

El levantamiento topográfico cuenta con 6373 puntos cada uno con sus respectivas coordenadas este, norte y altitud además de su descripción. Para el proyecto se cuenta con 73 puntos de control los mismos que están ubicados en el asfalto de la via existente, los cambios de estaciones son comprobados que el error está dentro del rango permitido para este tipo de mediciones que es de +/- 0.05 m.

### 1.6. Trabajo de gabinete

Con la información obtenida en el trabajo de campo, obtenida con la estación total se procede a importar los datos a una hoja electrónica Excel para ser importados al programa computacional civil 3d. Una vez importados los datos se traza la poligonal abierta la cual se procede a corregir, para el control de la ondulación vertical se utiliza el GEODAL EGM96 el cual es utilizado para América del sur.

Una vez corregidos los datos se procede a determinar las curvas de nivel.

**Tabla 10. Puntos de levantamiento topográfico**

### 1.8. Conclusiones

- El proyecto se encuentra en la zona UTM WGS 84 – ZONA 17 SUR
- Las coordenadas entregadas se encuentran en UTM, será necesario transformar a coordenadas topográficas para el replanteo.
- La estación permanente REGME utilizada para enlazar el proyecto a la red geodésica nacional fue la MAEC
- Las coordenadas del punto de partida en la planta potabilizadora de agua potable en la parroquia San Isidro y las coordenadas del punto de llegada se encuentra en la AV. Jaime Roldos Aguilera con la inscripción E30, además existen 5 puntos de control geodésico.

<b>COORDENADAS UTM SISTEMA WGS 1984 – ZONA 17 SUR</b>			
<b>NOMBRE</b>	<b>ESTE</b>	<b>NORTE</b>	<b>ALT. ELIP</b>
GPS01	814425.269	9755361.725	1210.419
GPS02	818010.965	9752573.882	1145.706
GPS03 – E01	819008.811	9750405.723	1145.514
GPS – E15	819866.138	9748079.427	1093.204
GPS05 – E30	820186.645	9745569.660	1057.817

- Las referencias BM se encuentran claramente identificables en el asfalto con marcas rectangulares de color rojo y blanco que tiene un clavo de acero en el centro con una distancia de 200m aproximadamente entre ellas.
- El levantamiento topográfico tiene una franja de 35m aproximadamente.
